Reviewer and Evaluator:

Besides being appointed for ordinary evaluation commitments as regular referee of international scientific journals, and external reviewer of PhD thesis in institutions other than his, two main high profile commitments characterize the International professional service "off-campus" of the Fellow:

- 1) He is **Chairman of the Panel C "Surface Science and Catalysis" of the board of expert evaluators of proposals submitted to Elettra**. As Chair he manages remotely the evaluation of an average of 80 proposal (for beam-time allocation) per semester and coordinates, beside being reviewer himself, the review process of eight peers selected for their internationally acknowledged level of experience and expertise on the use of synchrotron radiation facility. The Panel of Chairs (composed of seven members, coordinating about 60 reviewers) meets any semester at Elettra (Trieste IT) for the final shortlist of Proposals to be granted for beam-time. Chairs are appointed by the Chief of the Elettra S.p.A. prof. Alfonso Franciosi. The commitment is pro-bono.
- 2) Since 2008 he is an **experienced expert evaluator for the European Commission** for the evaluation of research projects (for example FET Open), and individual Marie Curie Fellowships. The Commitment is upon honorarium, it is either carried out remotely or on-site at Covent Garden Brussels, and implies an internationally acknowledged scientific reputation, work efficiency, and excellent interpersonal skills. He has been appointed as Evaluator, Rapporteur for drafting the consensus reports, and Monitor for the evaluation ex-poste of projects. So far he has been appointed to 10 Evaluation task for Horizon 2020, and 11 for the FP7 scheme. His profile is in the international data base of the expert evaluators of the European Commission and he has been recommended and appointed to evaluate so far other 14 schemes for National Projects of EU member States and Associated countries.

Luca Ottaviano RESEARCH

Research Profile brief history

Currently He is an internationally acknowledged leader in the study of fundamental physical (structural and electronic) properties of two-dimensional materials (Graphene, Transition Metal Dichalcogenides, and Cr-Halides). He is able to lead, and participate to, institutional, national, and international, multidisciplinary projects for applications of these materials in Materials Science, Gas sensing, and nano-bio technology. In the field of 2D materials he pioneered since 2008 the research in his institution, has started, chaired and organized the first Italian international Conference on Graphene and 2D materials (GraphITA 2011), he has edited two books for Springer, and he is (for graphene and 2D materials) expert evaluator for the European Commission and appointed member of the European Science foundation College of Expert Reviewers. He has published in this field 2 invited reviews papers and 35 research articles in International ISI indexed journals authoring 27 of them as first or senior (last author). He has given six invited talks, and 12 invited seminars. His interest on 2D materials dates back to 2008 and sparked from a short-term research stay at NPL (Teddington London).

Briefly In the past, he has focused his independent experimental research interest on three main topics: thin films of phthalocyanines and organic molecules, 2D metals on semiconductors, structural and electronic properties of Manganese in Germanium for spintronics applications. This coherent body of research has produced overall 115 research papers (out of which 53 led as first or last author), and has led to 30 Invited Talks and Seminars at international conferences and Institutions. During the very early stages as researcher (undergraduate) he has carried out supervised research on the structure of liquid metals studied with synchrotron radiation-based X-ray Absorption Spectroscopies (supervision of prof. A. Filipponi). This research has led to early papers two as first author and brought experience in the use of large-scale synchrotron radiation facilities. In relation to the use of synchrotron radiation sources he has participated to 15 beamtimes for a grand total of 260 shifts (2 LURE, 2 ESRF, 11 Elettra), he has personally submitted 5 proposals with an acceptance rate of 100%. The publication output, in relation to Synchrotron Radiation studies, has been of 24 scientific papers so-far.

The core of his experimental skills is: Scanning Tunneling Microscopy/Spectroscopy and X-Ray absorption and photoelectron spectroscopies using lab sources and synchrotron radiation facilities. This implies mastering technical skills, manual dexterity, and UHV technology. He is able to conceive, design, and personally run experiments, but He is now more active now in the coordination and supervision of experiments, data analysis and discussion and in individual drafting of a significant fraction (more than 50%) of his papers as a senior author.

Luca Ottaviano List of participated Conferences (61) and Invited Seminars (25)

I have conceived, procured funding, organized, and managed GraphITA 2011 the first international conference on graphene and 2D materials in Italy (opening lecture sir. K.Novoselov Nobel Prize in Physics 2010). The conference has continued as a graphX series in Europe (GraphHEL 2012, GraphESP 2014), I have then Co-Chaired GraphITA 2015. I have also Chaired and organised in 2009 the FNMA conference in Sulmona (AQ, Italy). I have attended a grand total of 53 conferences so far, 3 as chair, receiving 17 invited lectures at international conferences. The invited I am proud of is the one at the EMRS Conference in Strasbourg.
